Rooms, not pages.

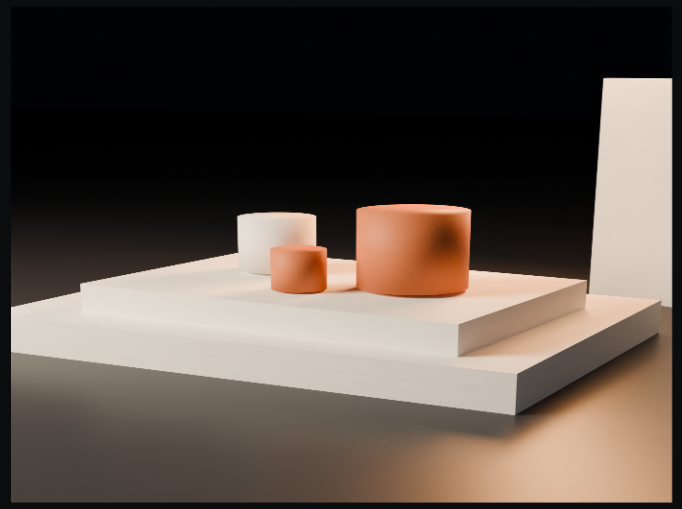

An interactive architecture studio. We model the space in Blender, light it with bpy automation and ship it in React — under two megabytes, sixty frames on a phone.

A page is a photograph of a place.

Customers do not read a spec sheet. They want to know what the room feels like at four in the afternoon, whether the sofa fits, how the light lands on the plaster. Every product site w

We build the room first and photograph nothing.

Three rooms, three trades.

COMMERCE

A gallery you can shop

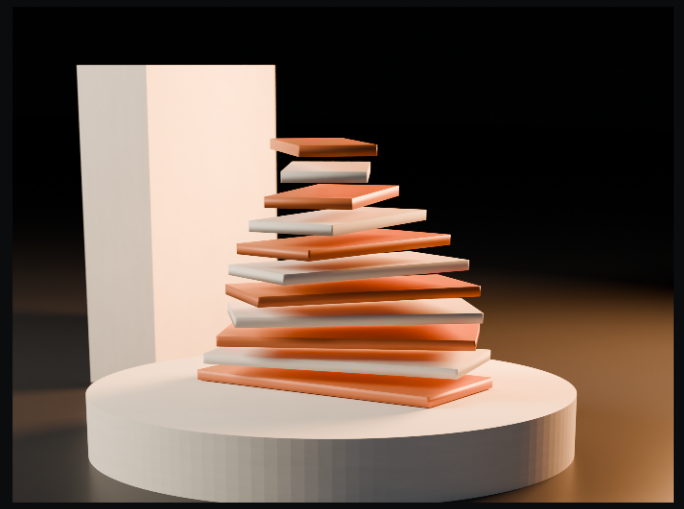

Every piece is a real object: turn it, place it, buy it.

PROPERTY

Every unit walkable

Sun studies baked in Blender, forty-eight apartments on one link.

LAUNCH

A moment, not a page

A scroll-driven reveal that turns a spec sheet into something people forward.

METHOD

Blockout · Forge · Budget · Wire · Harden

Five stages, each with an artefact you can open and a number it has to hit. If a scene cannot hold the budget, it does not ship.

01	Blockout	Camera path, scale and light direction locked before a single texture exists.
02	Forge	bpy builds the hero geometry, bakes lighting to lightmaps and exports gLTF with LOD chains.
03	Budget	Draco and KTX2 compression against a first-load ceiling you sign off before modelling starts.
04	Wire	React Three Fiber scenes, scroll timelines and a CMS your team can edit without a deploy.
05	Harden	GPU tiers, WebGL fallbacks, SEO-safe HTML and a Lighthouse gate in continuous integration.

CASE 01 · COMMERCE

Atelier Nova

A gallery where every piece is a real object you turn, place and buy. Product photography replaced by a room you can walk into.

RENDERED IN BLENDER · SHIPPED IN REACT

CASE 02 · PROPERTY

Meridian Towers

Forty-eight apartments, each lit for its real orientation. Sun studies computed in Blender and baked to a lightmap, so a phone draws the floor plan in one pass.

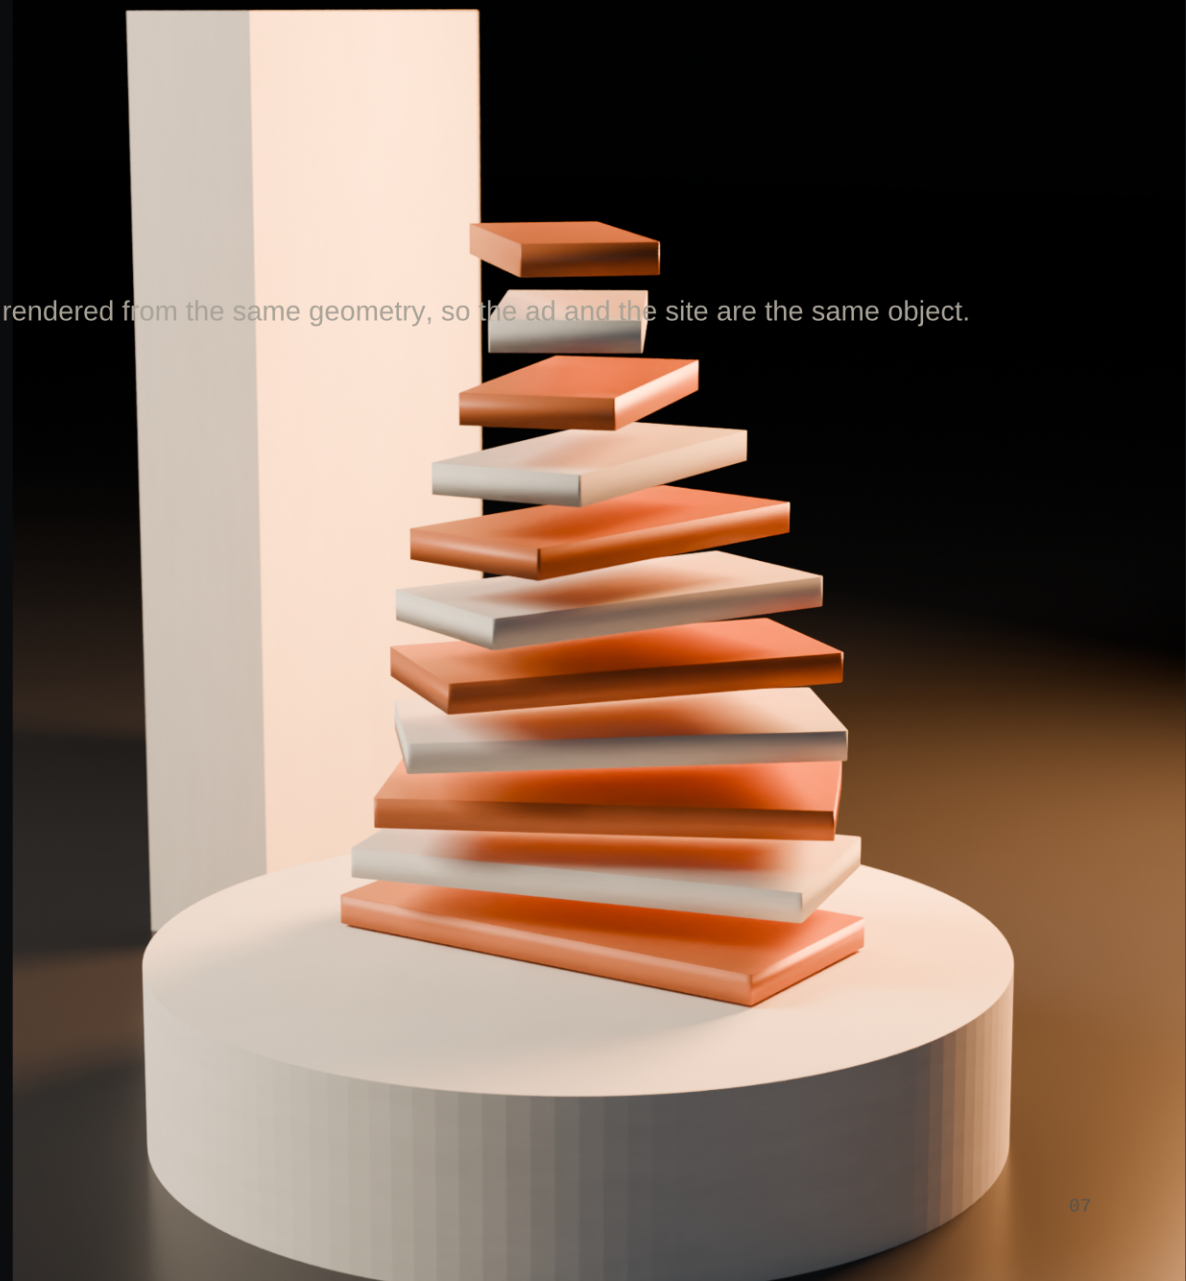

3.1×	SESSION LENGTH
48	UNITS WALKABLE
0	RENDER FARM

RENDERED IN BLENDER · SHIPPED IN REACT

CASE 03 · LAUNCH

Kinetic Labs

A scroll-driven reveal that turns a spec sheet into something people forward. The launch film is rendered from the same geometry, so the ad and the site are the same object.

THE STUDIO

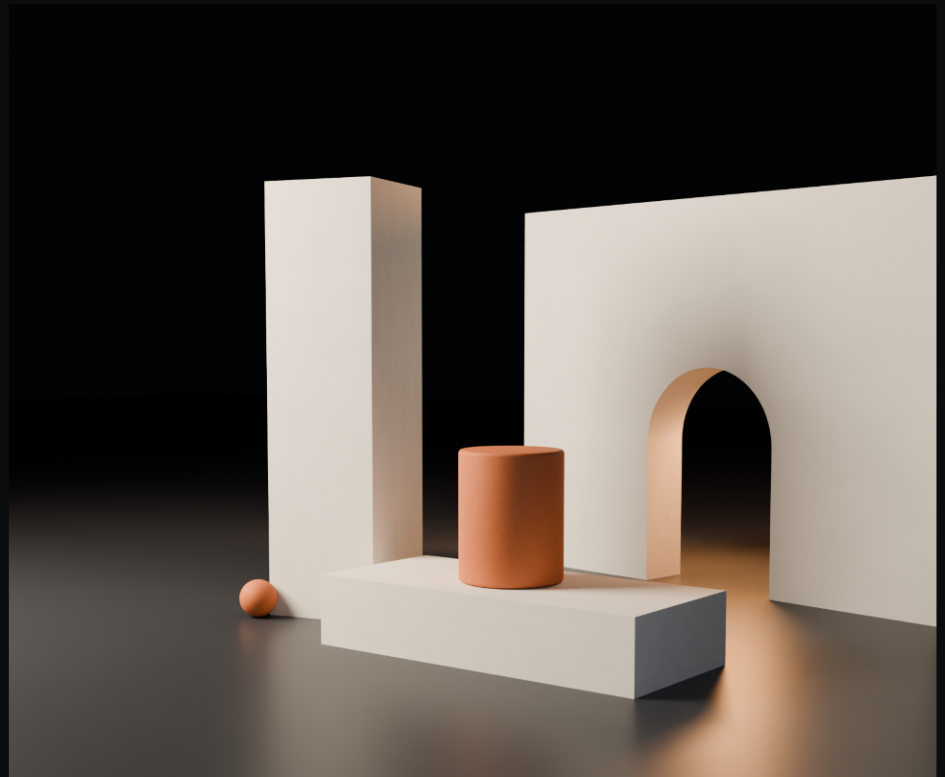

Blender hands, browser discipline.

KILN is three people on purpose: an asset engineer writing bpy automation, a creative developer owning the WebGL layer, and a motion designer who ships the campaign with every build. On

Blender · bpy · Cycles

Three.js · React Three Fiber · gLTF

Draco · KTX2 · Playwright

RATES

Fixed scope. Fixed number.

Every tier includes a written load budget, a Lighthouse gate in CI, source handover and a WebGL fallback.

SPAR

$4,800

TWO WEEKS

One walkthrough scene · three art-directed stills · mobile and no-WebGL fallbacks · source handover

KILN · MOST COMMISSIONED

$12,500

THREE TO FIVE WEEKS

Up to five scenes · custom asset pipeline and lightmaps · two revision passes

FIRING

$3,900 / mo

ROLLING

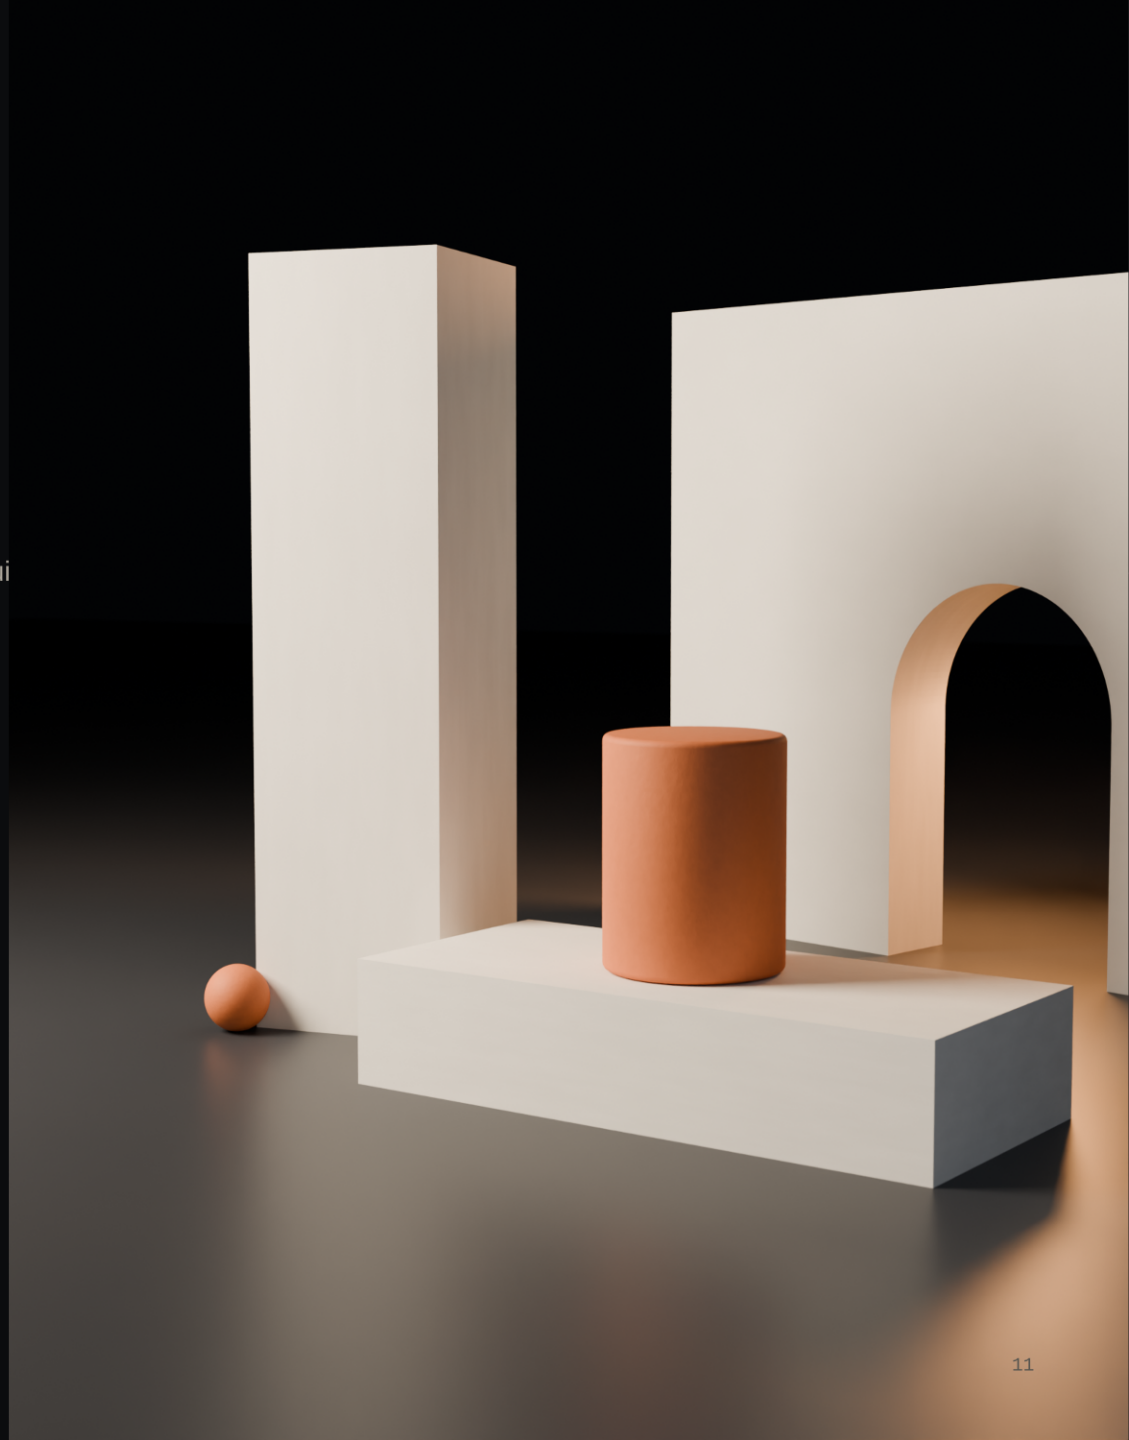

Two new stills per sprint · asset library upkeep · performance monitoring · mon

HOW IT HOLDS TOGETHER

One set, many pictures.

Every KILN build starts as a real Blender scene. That single decision pays three times: the site is bui

No stock imagery. No mock-ups. No lorem ipsum in the delivered build.

NEXT STEP

Send the product.
We'll send the room.

Within two working days you get a fixed price, a camera path and a load budget — no discovery invoice, no retainer to start.
