KILN · INTERACTIVE ARCHITECTURE

Rooms,

not pages.

An interactive architecture studio. We model the space in Blender, light it with bpy automation and ship it in React — under two megabytes, sixty frames on a phone.

STUDIO@KILN.STUDIO · KILN.STUDIO · +44 20 7946 0812

NEXT STEP

Send the product.

We'll send the room.

Within two working days you get a fixed price, a camera path and a load budget — no discovery invoice, no retainer to start.

HOW IT HOLDS TOGETHER

One set,

many pictures.

Every KILN build starts as a real Blender scene. That single decision pays three times: the site is built correctly, the launch film is rendered from the same geometry, and the ad stills are photographs rather than illustrations. One asset, one invoice, three channels.
No stock imagery. No mock-ups. No lorem ipsum in the delivered build.

PROVENANCE

RATES

Fixed scope. Fixed number.

Every tier includes a written load budget, a Lighthouse gate in CI, source handover and a WebGL fallback.

SPAR
$4,800

TWO WEEKS

One walkthrough scene · three art-directed stills · mobile and no-WebGL fallback · source handover

KILN · MOST
$12,500

COMMISSIONED

THREE TO FIVE WEEKS

Up to five rooms or products · bpy asset pipeline and lightmaps · launch kit: stills, loop, cuts

FIRING
$3,900 / mo

ROLLING

Two new scenes per sprint · asset library upkeep · performance monitoring · monthly ad creative

PRICING

THE STUDIO

Blender hands,

browser discipline.

KILN is three people on purpose: an asset engineer writing bpy automation, a creative developer owning the WebGL layer, and a motion designer who ships the campaign with every build. One pipeline, no hand-off to a render farm.

Blender · bpy · Cycles

Three.js · React Three Fiber · gLTF

Draco · KTX2 · Playwright

THREE PEOPLE, ONE PIPELINE

ENGINEERING

Beauty that survives

a mid-range phone.

Every build is measured on a Moto G, not a MacBook. The numbers below are the gate, not the aspiration.

<2.0 MB	60 fps
FIRST LOAD, COMPRESSED	SUSTAINED, MID-TIER GPU
≤8	95+
DRAW CALLS IN THE HERO SCENE	LIGHTHOUSE, MOBILE

THE BUDGET

CASE 03 · LAUNCH

Kinetic Labs

A scroll-driven reveal that turns a spec sheet into something people forward. The launch film is rendered from the same geometry, so the ad and the site are the same object.

2.4M	LAUNCH FILM VIEWS
6	WEEKS TO SHIP
1	SOURCE OF TRUTH

RENDERED IN BLENDER · SHIPPED IN REACT

CASE 02 · PROPERTY

Meridian Towers

Forty-eight apartments, each lit for its real orientation. Sun studies computed in Blender and baked to a lightmap, so a phone draws the floor plan in one pass.

3.1×	SESSION LENGTH
48	UNITS WALKABLE
0	RENDER FARM

RENDERED IN BLENDER · SHIPPED IN REACT

CASE 01 · COMMERCE

Atelier Nova

A gallery where every piece is a real object you turn, place and buy. Product photography replaced by a room you can walk into.

+38%	ADD TO CART
1.9 MB	FIRST LOAD
7	DRAW CALLS

RENDERED IN BLENDER · SHIPPED IN REACT

METHOD

Blockout · Forge · Budget · Wire · Harden

Five stages, each with an artefact you can open and a number it has to hit. If a scene cannot hold the budget, it does not ship.

01	Blockout	Camera path, scale and light direction locked before a single texture exists.
02	Forge	bpy builds the hero geometry, bakes lighting to lightmaps and exports gLTF with LOD chains.
03	Budget	Draco and KTX2 compression against a first-load ceiling you sign off before modelling starts.
04	Wire	React Three Fiber scenes, scroll timelines and a CMS your team can edit without a deploy.
05	Harden	GPU tiers, WebGL fallbacks, SEO-safe HTML and a Lighthouse gate in continuous integration.

HOW IT IS MADE

THE WORK

Three rooms, three trades.

COMMERCE
A gallery you can shop

Every piece is a real object: turn it, place it, buy it.

PROPERTY
Every unit walkable

Sun studies baked in Blender, forty-eight apartments on one link.

LAUNCH
A moment, not a page

A scroll-driven reveal that turns a spec sheet into something people forward.

WHAT WE BUILD

01 · THE PROBLEM

A page is a photograph

of a place.

Customers do not read a spec sheet. They want to know what the room feels like at four in the afternoon, whether the sofa fits, how the light lands on the plaster. Every product site we are asked to fix has the same failure: it describes the object and withholds the room.

We build the room first and photograph nothing.
