KILN

Rooms, not pages.

An interactive architecture studio. We model the space in Blender, light it with bpy and ship it in React — under two megabytes, sixty frames on a phone.

THE PROBLEM

A page is a photograph of a place.

Customers are asked to judge size, material and finish from a flat image — then guess wrong at the moment they would have bought. Video does not help: it cannot be explored. And most “3D websites” are forty-megabyte showreels that melt a phone on 4G.

No sense of scale

A 1.9 m sofa and a 1.4 m sofa photograph identically.

No sense of material

Plaster and stone differ in how they take light, not in colour.

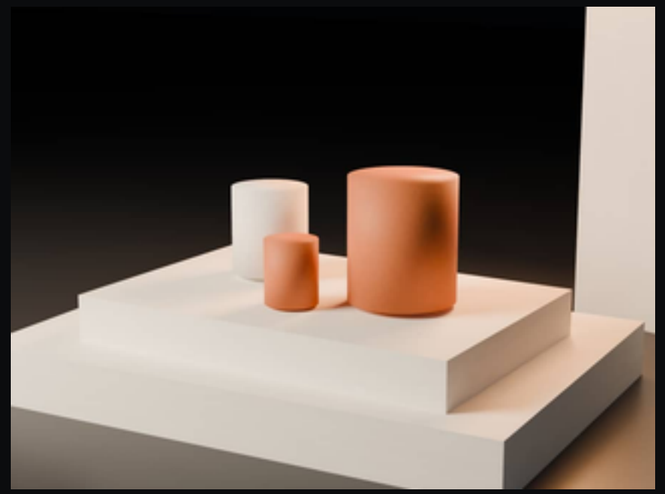

No sense of light

A north window at four in the afternoon is a buying argument.

THE WORK

Three rooms, three trades.

COMMERCE

A gallery you can shop

Every piece is a real object: turn it, place it, buy it.

PROPERTY

Every unit walkable

Sun studies baked in Blender, forty-eight apartments on one link.

LAUNCH

A moment, not a page

A scroll-driven reveal that turns a spec sheet into something people forward.

CASE 01 · COMMERCE

Atelier Nova

A flagship where every piece is a real object you turn, place and buy.

+38% ADD-TO-CART

1.9 MB FIRST LOAD

7 DRAW CALLS

RENDERED IN BLENDER · SHIPPED IN REACT

CASE 02 · PROPERTY

Meridian Towers

Forty-eight apartments, each lit for its real orientation. Sun studies computed in Blender and baked to a lightmap, so a phone draws the floor plate in one pass.

3.1×	SESSION LENGTH
48	UNITS WALKABLE
0	RENDER FARM

RENDERED IN BLENDER · SHIPPED IN REACT

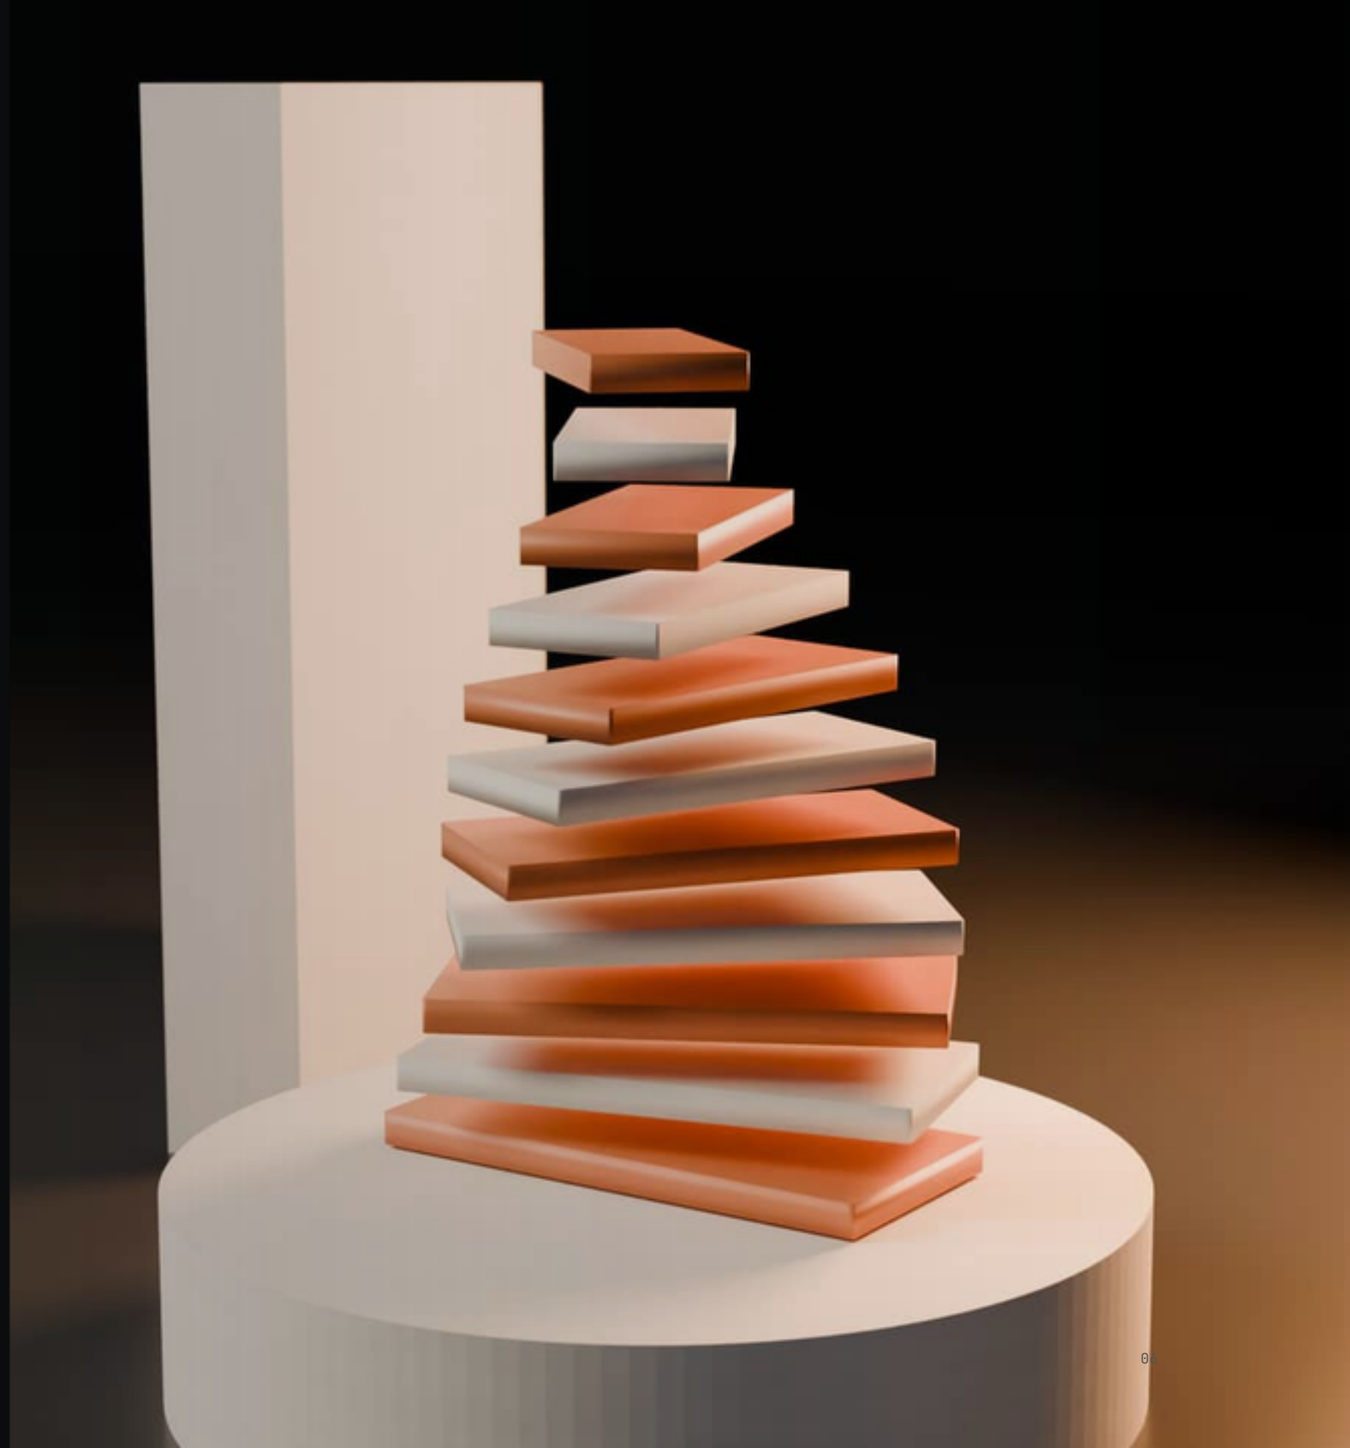

CASE 03 · LAUNCH

Kinetic Labs

A scroll-driven reveal built from one turned form. The launch film is rendered from the same geometry, so the ad and the site are the same object.

2.4M	CAMPAIGN VIEWS

RENDERED IN BLENDER · SHIPPED IN REACT

METHOD

Blockout · Forge · Budget · Wire · Harden

01

Blockout

Camera path, scale and light locked before a texture exists.

02

Forge

bpy builds the hero geometry, bakes lightmaps, exports glTF with LODs.

03

Budget

Draco and KTX2 measured against a ceiling signed off up front.

04

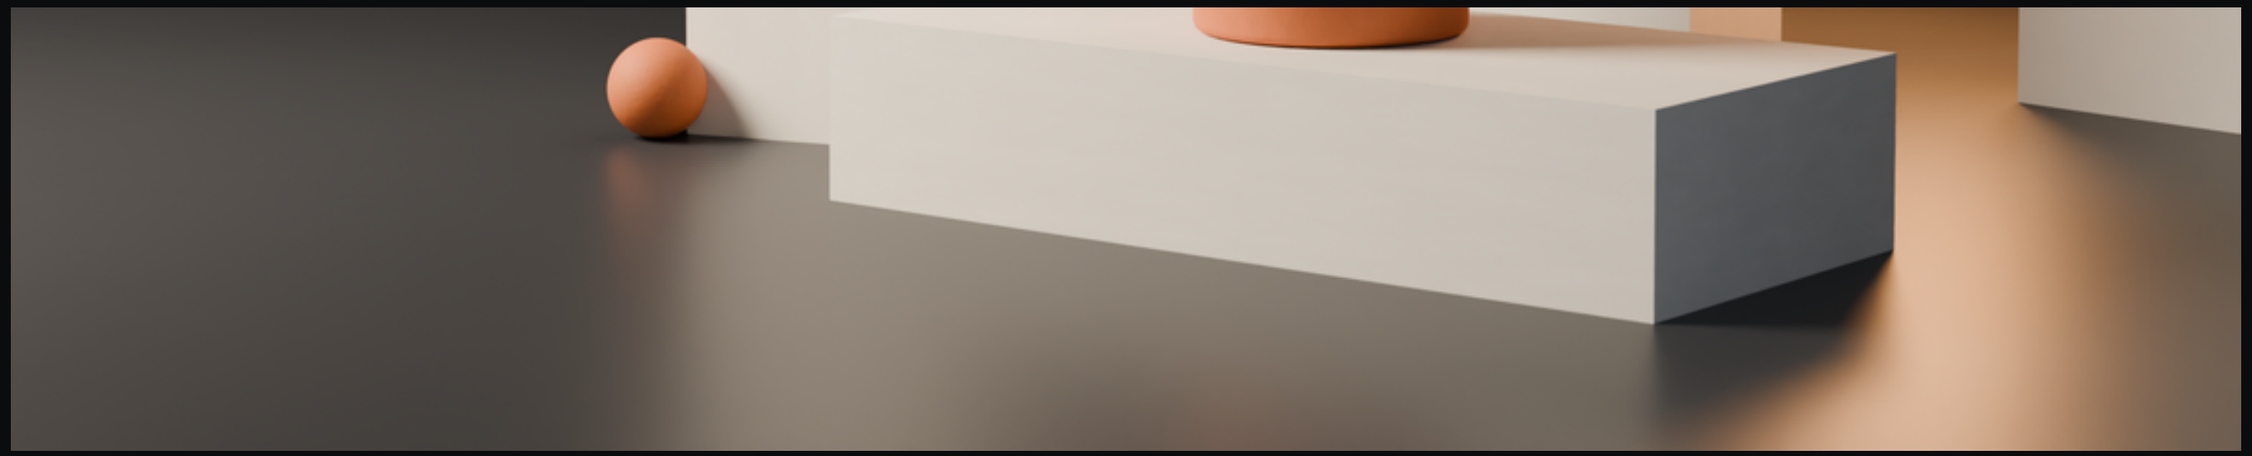

Wire

React Three Fiber scenes, scroll timelines, CMS bindings.

05

Harden

GPU tiers, fallbacks, SEO-safe HTML, a Lighthouse gate in CI.

ENGINEERING

Beauty that survives a mid-range phone.

< 2.0 MB

first load, fonts and JS included

60 fps

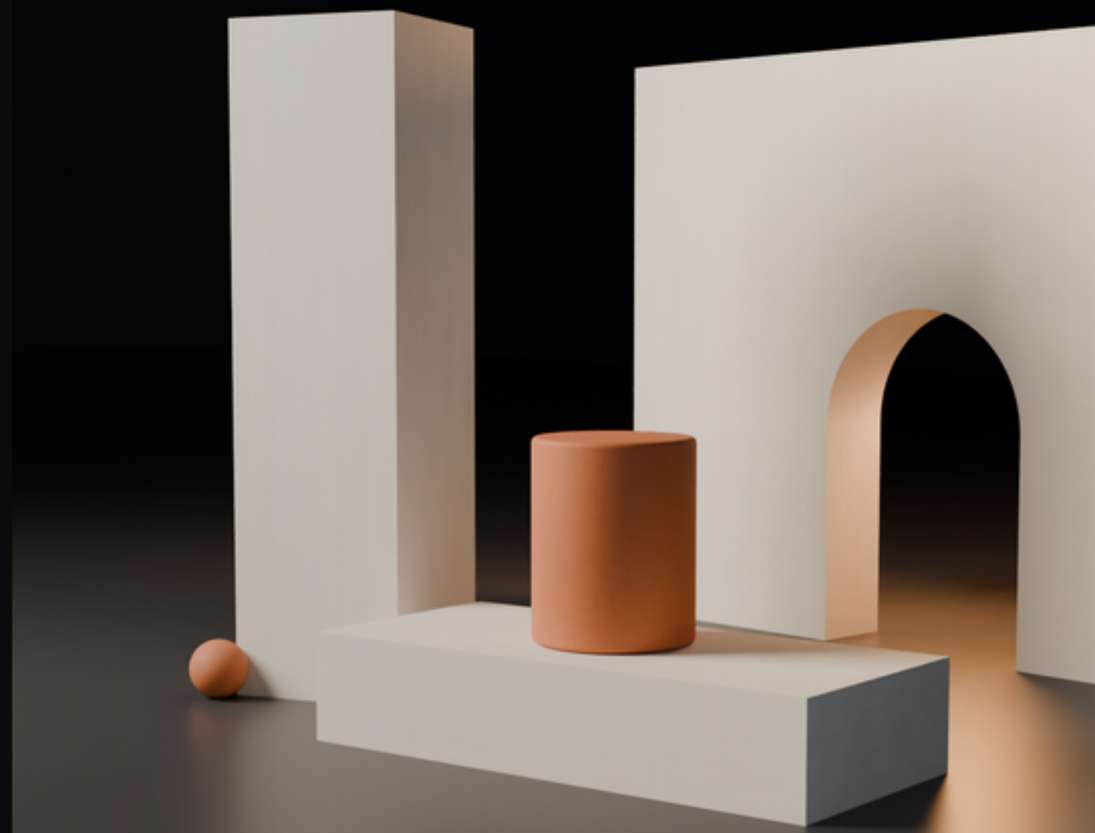

on a Pixel 6a / iPhone 12 tier GPU

8

draw calls in the hero scene

95+

Lighthouse, gated in CI

Blender hands, browser discipline.

KILN is three people on purpose: an asset engineer writing bpy automation, a creative developer owning the WebGL layer, and a motion designer who ships the campaign with every build. One pipeline, no handoff to a render farm.

Blender	bpy	Cycles
Three.js	React Three Fiber	gsap
Draco	KTX2	Playwright

Fixed scope. Fixed number.

Every tier includes a written load budget, a Lighthouse gate in CI, source handover and WebGL fallbacks.

SPAR

$4,800

2 weeks

One walkthrough scene, three art-directed stills, source handover.

KILN

$12,500

3–5 weeks

Up to five rooms, bpy pipeline, CMS, launch kit, thirty days of support.

FIRING

$3,900 / mo

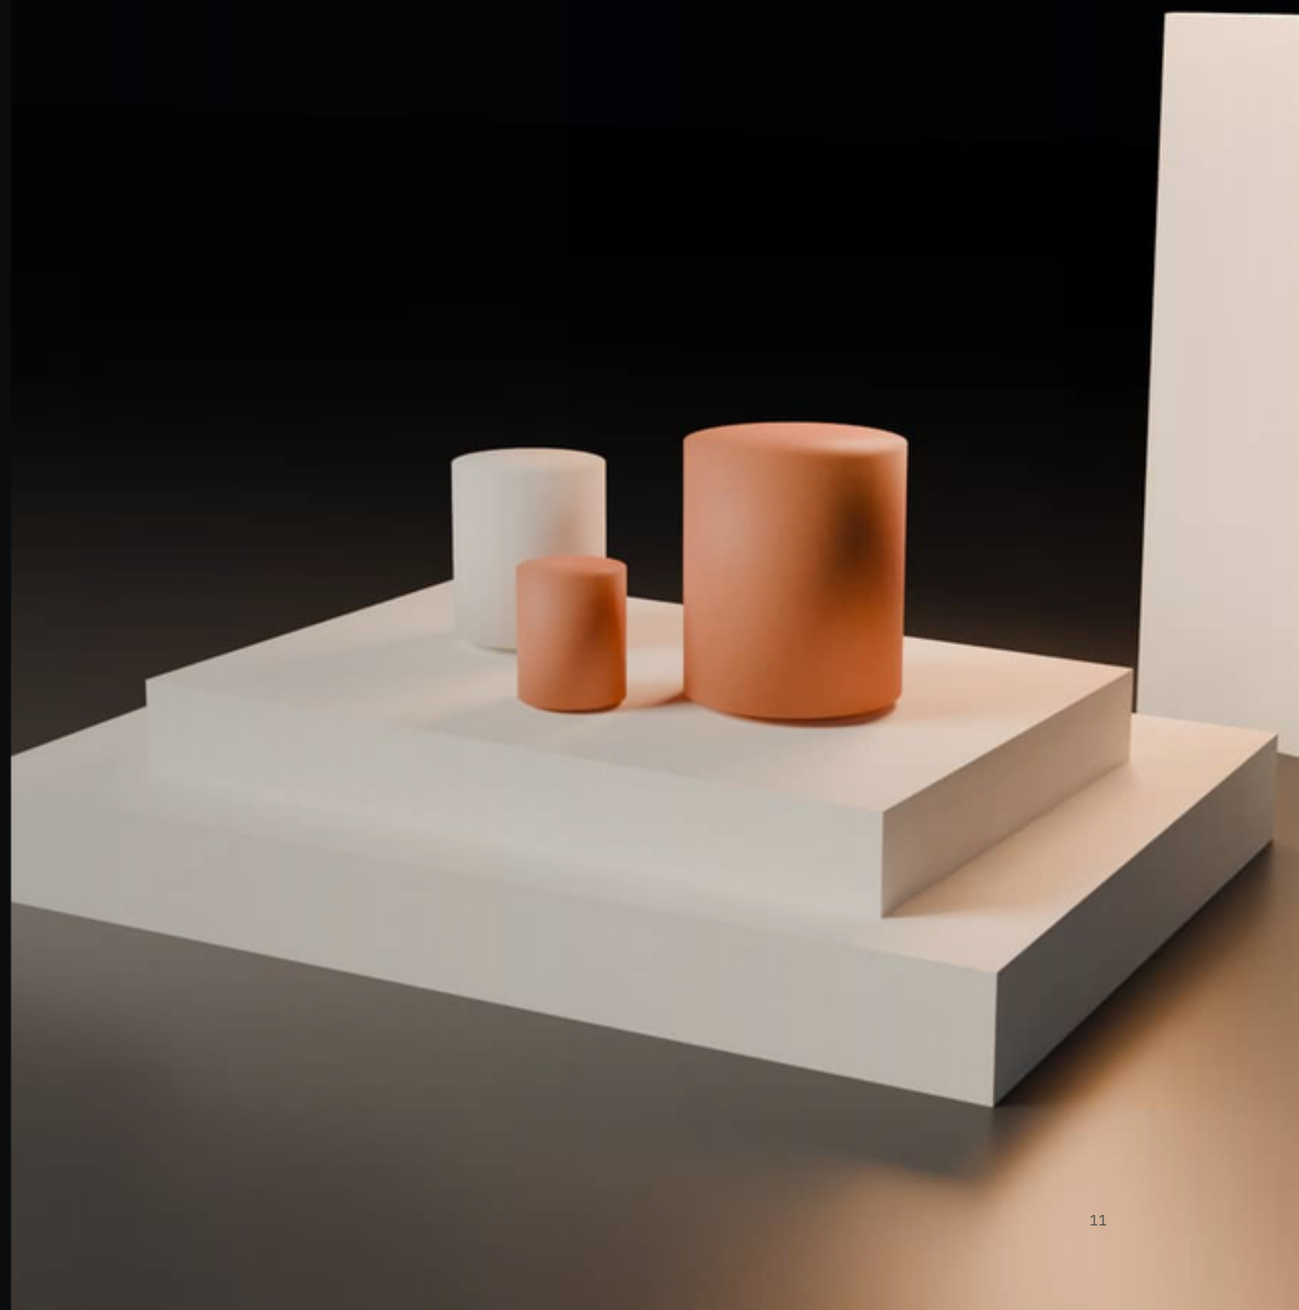

rolling

Two scenes per sprint, performance monitoring, monthly ad creative.

WHY IT HOLDS TOGETHER

One set, *many pictures.*

Every KILN build starts as a real Blender scene. That single decision pays three times: the site is lit correctly, the launch film is rendered from the same geometry, and the ad stills are photographs rather than illustrations. One asset, one invoice, three channels.

NEXT STEP

Send the product.
We send the room.

Within two working days: a fixed price, a camera path and a load budget. No discovery invoice, no retainer to start.
